

Background

The FMI was formed in 2014 as a result of extensive consultation with over 70 organisations from industry, academia and government.

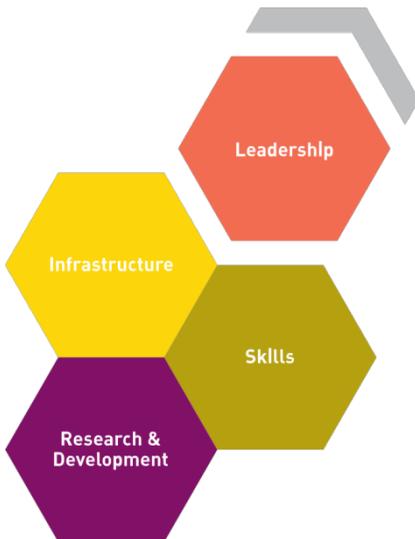

It responds to the Wood Report's recommendation for collaborative working to ensure economic growth. The FMI will meet the current and future flow measurement needs of North Sea Oil and Gas companies, and propel them to the forefront of subsea exploration and exploitation for years to come.

Members

The principals who have worked on the FMI to date are committed to working collaboratively, with a non-partisan approach.

There are two founder member organisations:

NEL
Coventry University

Over 20 other organisations have committed staff and resources to the Flow Measurement Institute. They include operators, manufacturers, the regulator, academia, service companies and laboratories.

The members deliver the vision by working across 4 areas of interest: leadership, infrastructure, skills and research & development.

Vision

The FMI will drive a cohesive approach to the future of flow measurement science and infrastructure to meet the emergent needs and challenges of industry.

Objectives

The principal objectives for the FMI are:

1. Developing a conduit to co-ordinate **Flow Measurement Views** and act as the **Voice** of the Industry
2. Devising mechanisms to raise the level of **Flow Measurement Skills** in the Industry
3. Ensuring an appropriate **Flow Measurement Infrastructure** to meet current and future industry needs
4. Developing co-ordination in **Flow Measurement Research**, particularly focussing on emerging, as yet unanticipated, needs
5. Developing and sharing **Flow Measurement Best Practice**
6. Considering sustainable models through which to deliver the above initiatives, which might be a tangible or virtual Centre of Excellence, or some other mechanism.

Get Involved

The FMI exists for the benefit of its members.

In the current structure there is no cost to participate, the only requirement is a willingness to collaborate where a potential exists for mutual benefit.

Knowledge sharing is key. The FMI website is the conduit for making contacts, and a fledgling LinkedIn group exists.

Communications are co-ordinated by the Secretariat and news updates are issued electronically.
